

## Self Vinyl Installation Tutorial

Custom pre-spaced vinyl lettering, logos, stickers and decals can be cut and delivered to end-users for easy DIY installation. Adhesive vinyl can be applied to virtually any smooth non-porous surface.

### You need:

1. Towel - Paper towel is not preferred because paper dust may result unexpected bubbles
2. Scraper - For removing previously applied vinyl and remaining adhesive dirt
3. Adhesive Removing Fluid - Ready-made chemical for removing remaining old adhesive dirt
4. Squirt Bottle - Filled with ready-made application fluid or DIY mixture of 80% water and 20% dish soap
5. Squeegee - To remove air bubbles when applying
6. Heat Gun or Hair Dryer - To speed up drying time

### Steps:

#### 1. Clean

- Scrape away all previously applied vinyl and remaining adhesive dirt
- Use dampened towel to clean all dust on the surface

#### 2. Peel

- Peel release paper backing

#### 3. Spray

- Spray application fluid on the adhesive side of vinyl and surface with squirt bottle

#### 4. Position

- Position the sign to the surface while the sign and the surface are wet

#### 5. Smooth

- Smooth the sign into position
- If the sign does not slide, try to add more application solution

#### 6. Squeegee

- Squeegee from center outwards to remove air bubbles
