

Printing Business Cheques

Business cheques come in various sizes and styles; Continuous, Laser, and Manual are the three standard types of cheques and most of them can be custom printed with your company logo & company information.

Continuous Cheques were popular and could be imprinted by dot matrix printers. Laser Cheques can be printed on your laser or inkjet printers from your accounting or financial software like Simply Accounting, Quickbooks, Quicken, and Peachtree. Business cheques also come blank (single, double, or 3up on letter size format), so you can manually input detailed information. If you want to save printing cost, try to order simple single color with standard pantograph (the security background pattern).

Business cheques can be order through Banks or CET. Make sure that you provide information including:

- Company Information (Name, Address, Phone Numbers, Logo)
- Bank Account Number
- Bank Information (Name, Address)
- The Number of Signature Needed
- Starting Cheque Number
- Canadian Fund, U.S. Fund, or others
